SCR

ALBA LIGHT TARGET DRONE

The **ALBA** is a highly reliable and easily transportable light target tug.

ALBA is one of SCR's most emblematic target drones. Over 350 units of this small target drone have been designed and built in collaboration with the Spanish Aerospace Technical Institute (INTA)– have been commissioned since its launch.

This target drone has been continuously developed to incorporate the latest technologies and is outstanding for its tremendous reliability, proven in hundreds of flight operations.

The **ALBA** is a highly operative and easily transportable target drone thanks to its design and its minimal dimensions, of only 2.2 metres in wingspan and 1.8 metres in length.

The **ALBA** aerial target is specially adapted to be used in manoeuvres with 35-90 mm cannons and with MISTRAL or similar missiles. As with the rest of the SCR target family, a wide variety of payloads can be incorporated to tailor the system to the customer's needs.

TECHNICAL INFO

WINGSPAN:	2,200 mm
LENGTH:	1,800 mm
MTOW:	25 kg
PAYLOAD:	3 kg
MAX. ALTITUDE:	3,500 m
MAX. SPEED:	30-50 m/s
RANGE:	60 km
ENDURANCE:	60 min
